Matrični metodi u računarstvu
Domaći zadatak II

Stefan Aleksić 16995

27. Mart, 2020. god.

Zadaci:

1. Data je LU faktorizacija matrice A :

$$A = \begin{bmatrix} 2 & -1 & 0 \\ -6 & 4 & -1 \\ 4 & -6 & 7 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 \\ -3 & 1 & 0 \\ 2 & -4 & 1 \end{bmatrix} \begin{bmatrix} 2 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & 0 & 3 \end{bmatrix}$$

Opisati, bez izračunavanja, koje elementarne operacije nad vrstama su upotrebljene za dovođenje matrice A na gornji trougaoni oblik. Voditi računa o redosledu navođenja operacija.

Rešenje: Kako bi prešli sa matrice A na proizvod matrica LU , odnosno dobili gornju trougaonu matricu U potrebno je:

- 1: Množenje prve vrste količnikom drugog i prvog elementa prve kolone ($R_1 * \frac{a_{21}}{a_{11}}$).
- 2: Oduzimanje tako pomnožene prve vrste od druge vrste matrice A ($R_2 - R_1 * \frac{a_{21}}{a_{11}}$).
- 3: Množenje prve vrste matrice A količnikom trećeg i prvog elementa prve kolone matrice ($R_1 * \frac{a_{31}}{a_{11}}$).
- 4: Oduzimanje tako pomnožene prve vrste od treće vrste matrice A ($R_3 - R_1 * \frac{a_{31}}{a_{11}}$).
- 5: Množenje druge vrste količnikom trećeg i drugog elementa druge kolone matrice ($R_2 * \frac{a_{32}}{a_{22}}$).
- 6: Oduzimanje tako pomnožene druge vrste od treće vrste matrice A ($R_3 - R_2 * \frac{a_{32}}{a_{22}}$).

Napomena:

Primititi da se oduzimanje može gledati kao sabiranje, pritom kolonu kojom oduzimamo množimo količnikom pomnoženim sa (-1) :

$$A = \begin{bmatrix} 2 & -1 & 0 \\ -6 & 4 & -1 \\ 4 & -6 & 7 \end{bmatrix} \begin{matrix} \leftarrow *3 \\ \leftarrow + \\ \leftarrow + \end{matrix} \begin{matrix} \\ \\ *(-2) \end{matrix} \simeq \begin{bmatrix} 2 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & -4 & 7 \end{bmatrix} \begin{matrix} \\ \leftarrow *4 \\ \leftarrow + \end{matrix} \simeq \begin{bmatrix} 2 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & 0 & 3 \end{bmatrix} = U$$

2. Neka su $a_i \neq 0$ međusobno različiti brojevi. Odrediti LU faktorizaciju sledećih Vandermon-dovih matrica.

$$V_2 = \begin{bmatrix} 1 & 1 \\ a_1 & a_2 \end{bmatrix}, V_3 = \begin{bmatrix} 1 & 1 & 1 \\ a_1 & a_2 & a_3 \\ a_1^2 & a_2^2 & a_3^2 \end{bmatrix}, V_4 = \begin{bmatrix} 1 & 1 & 1 & 1 \\ a_1 & a_2 & a_3 & a_4 \\ a_1^2 & a_2^2 & a_3^2 & a_4^2 \\ a_1^3 & a_2^3 & a_3^3 & a_4^3 \end{bmatrix}$$

Opisati uočenu pravilnost.

Rešenje:

$$V_2 = \begin{bmatrix} 1 & 1 \\ a_1 & a_2 \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1) \\ + \end{array} \implies V_2 = L_{V_2} U_{V_2} = \begin{bmatrix} 1 & 0 \\ a_1 & 1 \end{bmatrix} \begin{bmatrix} 1 & 1 \\ 0 & a_2 - a_1 \end{bmatrix}$$

$$V_3 = \begin{bmatrix} 1 & 1 & 1 \\ a_1 & a_2 & a_3 \\ a_1^2 & a_2^2 & a_3^2 \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1) \\ + \end{array} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1^2) \\ + \end{array} \simeq \begin{bmatrix} 1 & 1 & 1 \\ 0 & a_2 - a_1 & a_3 - a_1 \\ 0 & a_2^2 - a_1^2 & a_3^2 - a_1^2 \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-\frac{a_2^2 - a_1^2}{a_2 - a_1} = -(a_1 + a_2)) \\ + \end{array}$$

(2.1)

$$(a_3^2 - a_1^2) - ((a_3 - a_1)(a_1 + a_2)) = (a_3 - a_1)((a_3 + a_1) - (a_1 + a_2)) = (a_3 - a_1)(a_3 - a_2) = \mathbf{v_{33}}$$

$$\implies L_{V_3} = \begin{bmatrix} 1 & 0 & 0 \\ a_1 & 1 & 0 \\ a_1^2 & \frac{a_2^2 - a_1^2}{a_2 - a_1} & 1 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 \\ a_1 & 1 & 0 \\ a_1^2 & a_2 + a_1 & 1 \end{bmatrix} = \left[\begin{array}{cc|c} L_{V_2} & & O \\ a_1^2 & a_1 + a_2 & 1 \end{array} \right]$$

$$\implies U_{V_3} = \begin{bmatrix} 1 & 1 & 1 \\ 0 & a_2 - a_1 & a_3 - a_1 \\ 0 & 0 & \mathbf{v_{33}} \end{bmatrix} = \left[\begin{array}{c|c} U_{V_2} & 1 \\ O & a_3 - a_1 \\ \hline & \mathbf{v_{33}} \end{array} \right]$$

$$V_4 = \begin{bmatrix} 1 & 1 & 1 & 1 \\ a_1 & a_2 & a_3 & a_4 \\ a_1^2 & a_2^2 & a_3^2 & a_4^2 \\ a_1^3 & a_2^3 & a_3^3 & a_4^3 \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1) \\ + \end{array} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1^2) \\ + \end{array} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-a_1^3) \\ + \end{array} \simeq$$

$$\simeq \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & a_2 - a_1 & a_3 - a_1 & a_4 - a_1 \\ 0 & a_2^2 - a_1^2 & a_3^2 - a_1^2 & a_4^2 - a_1^2 \\ 0 & a_2^3 - a_1^3 & a_3^3 - a_1^3 & a_4^3 - a_1^3 \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-\frac{a_2^2 - a_1^2}{a_2 - a_1} = -(a_1 + a_2)) \\ + \end{array} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-\frac{a_2^3 - a_1^3}{a_2^2 - a_1^2} = -(a_1^2 + a_1 a_2 + a_2^2)) \\ + \end{array}$$

$$\simeq \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & a_2 - a_1 & a_3 - a_1 & a_4 - a_1 \\ 0 & 0 & \mathbf{v_{33}} & \mathbf{v_{34}} \\ 0 & 0 & \mathbf{v_{43}} & \mathbf{v'_{44}} \end{bmatrix} \begin{array}{c} \leftarrow \begin{array}{c} \text{ } \end{array} \text{ } \\ \text{ } \end{array} \begin{array}{c} *(-\frac{\mathbf{v_{43}}}{\mathbf{v_{33}}}) \\ + \end{array}$$

(2.2)

$$(a_3^3 - a_1^3) - ((a_3 - a_1)(a_1^2 + a_1 a_2 + a_2^2)) = (a_3 - a_1)((a_1^2 + a_1 a_3 + a_3^2) - (a_1^2 + a_1 a_2 + a_2^2)) =$$

$$= (a_3 - a_1)(a_3 - a_2)(a_1 + a_2 + a_3) = \mathbf{v_{43}}$$

(2.3)

$$(a_4^2 - a_1^2) - ((a_4 - a_1)(a_1 + a_2)) = (a_4 - a_1)((a_4 + a_1) - (a_1 + a_2)) = (a_4 - a_1)(a_4 - a_2) = \mathbf{v_{34}}$$

(2.4)

$$(a_4^3 - a_1^3) - ((a_4 - a_1)(a_1^2 + a_1 a_2 + a_2^2)) = (a_4 - a_1)((a_1^2 + a_1 a_4 + a_4^2) - (a_1^2 + a_1 a_2 + a_2^2)) =$$

$$= (a_4 - a_1)(a_4 - a_2)(a_1 + a_2 + a_4) = \mathbf{v'_{44}}$$

(2.5)

$$\begin{aligned}
\mathbf{v}_{44}' - \mathbf{v}_{34} * \frac{\mathbf{v}_{43}}{\mathbf{v}_{33}} &= \mathbf{v}_{44}' - (a_4 - a_1)(a_4 - a_2) * \frac{(a_3 - a_1)(a_3 - a_2)(a_1 + a_2 + a_3)}{(a_3 - a_1)(a_3 - a_2)} = \\
&= (a_4 - a_1)(a_4 - a_2)(a_1 + a_2 + a_4) - (a_4 - a_1)(a_4 - a_2)(a_1 + a_2 + a_3) = \\
&= (a_4 - a_1)(a_4 - a_2)(a_1 + a_2 + a_4 - a_1 - a_2 - a_3) = (a_4 - a_1)(a_4 - a_2)(a_4 - a_3) = \mathbf{v}_{44}
\end{aligned}$$

$$\Rightarrow L_{V_4} = \begin{bmatrix} 1 & 0 & 0 & 0 \\ a_1 & 1 & 0 & 0 \\ a_1^2 & a_1 + a_2 & 1 & 0 \\ a_1^3 & a_2^2 + a_2 a_1 + a_1^2 & \mathbf{v}_{43} & 1 \end{bmatrix} = \left[\begin{array}{ccc|c} L_{V_3} & & & O \\ a_1^3 & a_2^2 + a_2 a_1 + a_1^2 & \mathbf{v}_{43} & 1 \end{array} \right]$$

$$\Rightarrow U_{V_4} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & a_2 - a_1 & a_3 - a_1 & a_4 - a_1 \\ 0 & 0 & \mathbf{v}_{33} & \mathbf{v}_{34} \\ 0 & 0 & 0 & \mathbf{v}_{44} \end{bmatrix} = \left[\begin{array}{ccc|c} U_{V_3} & & & 1 \\ & a_4 - a_1 & & \\ & \mathbf{v}_{34} & & \\ O & & & \mathbf{v}_{44} \end{array} \right]$$

Zaključak: Na osnovu prethodnih dekompozicija možemo zaključiti sledeće:

$$\begin{aligned}
V_n &= \begin{bmatrix} 1 & 1 & 1 & \cdots & 1 & 1 \\ a_1 & a_2 & a_3 & \cdots & a_{n-1} & a_n \\ a_1^2 & a_2^2 & a_3^2 & \cdots & a_{n-1}^2 & a_n^2 \\ \vdots & \vdots & a_3^3 & \ddots & \vdots & \vdots \\ a_1^{n-1} & a_2^{n-1} & a_3^{n-1} & \cdots & a_{n-1}^{n-1} & a_n^{n-1} \end{bmatrix} = L_{V_n} U_{V_n} = \\
&= \left[\begin{array}{ccc|c} L_{V_{n-1}} & & & O \\ a_1^{n-1} & \frac{a_2^{n-1} - a_1^{n-1}}{a_2 - a_1} & \cdots & \mathbf{v}_{n(n-1)} \end{array} \right] \left[\begin{array}{ccc|c} & & & 1 \\ & a_n - a_1 & & \\ & (a_n - a_1)(a_n - a_2) & & \\ & \vdots & & \\ & \mathbf{v}_{(n-1)n} & & \\ O & & & \mathbf{v}_{nn} \end{array} \right]
\end{aligned}$$

$$\text{Gde je } \mathbf{v}_{nm} = \begin{cases} \prod_{p=1}^{n-1} (a_m - a_p), (n \leq m) & \iff (\mathbf{v}_{nm} \in U) \\ \sum_{k=1}^m a_k * \prod_{p=1}^{m-1} (a_m - a_p), (n > m) & \iff (\mathbf{v}_{nm} \in L) \end{cases}, \text{ odnosno } \mathbf{v}_{nm} \in R.$$

3. Da li su sledeća tvrđenja tačna?

- Kvadratna matrica A koja ima neki element glavne dijagonale jednak nuli je singularna matrica.
 - Ukoliko je neki pivot element matrice A u LU faktorizaciji jednak nuli, matrica A je singularna.
- Obrazložiti odgovore.

Rešenje: -Prvu tvrdnju lako možemo opovrgnuti nalaženjem regularne matrice koja za neki od elemenata glavne dijagonale ima nulu, na primer:

$$S = \begin{bmatrix} 0 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix}$$

Potražimo determinantu matrice S :

$$\det(S) = \begin{vmatrix} 0 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{vmatrix} = (0*5*9) + (2*6*7) + (3*4*8) - ((7*5*3) + (8*6*0) + (9*4*2)) = \quad (3.1)$$

$$= 84 + 96 - (105 + 72) = 180 - 177 = 3$$

Čak možemo otići i korak dalje:

$$S_1 = \begin{bmatrix} 0 & 2 & 3 \\ 4 & 0 & 6 \\ 7 & 8 & 0 \end{bmatrix} \implies \det(S) = \begin{vmatrix} 0 & 2 & 3 \\ 4 & 0 & 6 \\ 7 & 8 & 0 \end{vmatrix} = (0*0*0) + (2*6*7) + (3*4*8) - ((7*0*3) + (8*6*0) + (0*4*2)) = \quad (3.2)$$

$$= 84 + 96 = 180$$

\implies Matrica koja na glavnoj dijagonali ima neke, ili čak sve elemente jednake nuli, ne mora da bude singularna.

-Za ispitivanje druge tvrdnje možemo se pozvati na prvu (3.1), s obzirom da je prvi pivot element ujedno i prvi element glavne dijagonale.

Ali hajde da vidimo kako bi izgledala LU faktORIZACIJA matrice S , s obzirom da znamo vezu između $\det(S)$ i $\det(U)$:

$$S = LU \implies \det(S) = \det(LU) = \det(L) * \det(U) = 1 * \det(U) = \det(U)$$

Oдавde vidimo da je $\det(S) = \det(U)$.

Pre nego što krenemo sa računanjem matrice U , moramo prvo da uradimo permutaciju matrice S , s obzirom da nam je pivot element jednak nuli. Za to ćemo iskoristiti permutacionu matricu P :

$$S = \begin{bmatrix} 0 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix} \begin{matrix} \swarrow \\ \swarrow \end{matrix} \implies PS = \begin{bmatrix} 4 & 5 & 6 \\ 0 & 2 & 3 \\ 7 & 8 & 9 \end{bmatrix} \implies P = \begin{bmatrix} 0 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

Pravilo permutacione matrice:

$$P * P^T = P^T * P = I \implies P^T = P^{-1} = \begin{bmatrix} 0 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix} = P \implies \det(P) = \begin{vmatrix} 0 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{vmatrix} = -1$$

Više ne tražimo faktORIZACIJU matrice S , već matrice PS :

$$PS = \begin{bmatrix} 4 & 5 & 6 \\ 0 & 2 & 3 \\ 7 & 8 & 9 \end{bmatrix} \xrightarrow[\leftarrow_+]{\begin{matrix} \leftarrow^{*(-7/4)} \\ \leftarrow_+ \end{matrix}} \simeq \begin{bmatrix} 4 & 5 & 6 \\ 0 & 2 & 3 \\ 0 & -\frac{3}{4} & -\frac{3}{2} \end{bmatrix} \xrightarrow[\leftarrow_+]{\begin{matrix} \leftarrow^{*(3/8)} \\ \leftarrow_+ \end{matrix}} \simeq \begin{bmatrix} 4 & 5 & 6 \\ 0 & 2 & 3 \\ 0 & 0 & -\frac{3}{8} \end{bmatrix} = U$$

$$PS = \tilde{L}U \quad | \quad * (P^{-1}) \implies P^{-1}PS = P^{-1}\tilde{L}U \implies \det(P^{-1}PS) = \det(P^{-1}\tilde{L}U)$$

$$\implies \det(S) = \det(P^{-1}) * \det(\tilde{L}) * \det(U) \implies \det(S) = (-1) * (4 * 2 * (-\frac{3}{8})) = 3$$

\implies Ni matrica sa nulom za pivot element ne mora biti singularna.

4. Data je LU faktorizacija matrice A sa

$$\begin{bmatrix} a_1 \\ a_2 \\ a_3 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 \\ l_{21} & 1 & 0 \\ l_{31} & l_{32} & 1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \\ u_3 \end{bmatrix}$$

Dokazati da važi:

$$\begin{aligned} L(a_1) &= L(u_1) \\ L(a_1, a_2) &= L(u_1, u_2) \\ L(a_1, a_2, a_3) &= L(u_1, u_2, u_3) \end{aligned}$$

Opisati i dokazati analogno tvrđenje za kolone matrice A i L .

Rešenje:

I) Pretpostavljamo da su vektori: $a_1, a_2, a_3, u_1, u_2, u_3 \in \mathcal{M}_{1 \times n}$, na osnovu $A = LU$, dobijamo sistem:

$$\iff \left\{ \begin{array}{l} \mathbf{a)} \quad a_1 = \begin{bmatrix} 1 & 0 & 0 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \\ u_3 \end{bmatrix} = u_1 \implies a_1 = u_1 \\ \mathbf{b)} \quad a_2 = \begin{bmatrix} l_{21} & 1 & 0 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \\ u_3 \end{bmatrix} = l_{21}u_1 + u_2 \implies a_2 = l_{21}u_1 + u_2 \\ \mathbf{c)} \quad a_3 = \begin{bmatrix} l_{31} & l_{32} & 1 \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \\ u_3 \end{bmatrix} = l_{31}u_1 + l_{32}u_2 + u_3 \implies a_3 = l_{31}u_1 + l_{32}u_2 + u_3 \end{array} \right. \quad (4.1)$$

a)

$a_1 = u_1 \implies$ vektori a_1 i u_1 su linearno zavisni.

$$L(a_1) = \{\forall p_x \in R^x \mid p_x = \lambda_1 a_1 \mid \lambda_1 \in R\}$$

$$L(u_1) = \{\forall q_x \in R^x \mid q_x = \xi_1 u_1 \mid \xi_1 \in R\}$$

$$\implies \lambda_1 = \xi_1 \implies L(a_1) = L(u_1)$$

b)

$a_2 = l_{21}u_1 + u_2 \implies$ vektori a_2, u_1 i u_2 su linearno zavisni.

$$L(a_1, a_2) = \{\forall p_x \in R^x \mid p_x = \lambda_1 a_1 + \lambda_2 a_2 \mid \lambda_1, \lambda_2 \in R\}$$

$$L(u_1, u_2) = \{\forall q_x \in R^x \mid q_x = \xi_1 u_1 + \xi_2 u_2 \mid \xi_1, \xi_2 \in R\}$$

$$p_x = q_x \quad \wedge \quad a_1 = u_1 \quad \wedge \quad a_2 = l_{21}u_1 + u_2$$

$$\implies \lambda_1 a_1 + \lambda_2 a_2 = \xi_1 u_1 + \xi_2 u_2$$

$$\implies \lambda_1 u_1 + \lambda_2 (l_{21}u_1 + u_2) = \xi_1 u_1 + \xi_2 u_2$$

$$\implies u_1(\lambda_1 + \lambda_2 l_{21}) + u_2(\lambda_2) = u_1(\xi_1) + u_2(\xi_2)$$

$$\implies \xi_1 = \lambda_1 + l_{21}\lambda_2, \quad \xi_2 = \lambda_2 \implies L(a_1, a_2) = L(u_1, u_2)$$

c)

$a_3 = l_{31}u_1 + l_{32}u_2 + u_3 \implies$ vektori a_3, u_1, u_2 i u_3 su linearno zavisni.

$$L(a_1, a_2, a_3) = \{\forall p_x \in R^x \mid p_x = \lambda_1 a_1 + \lambda_2 a_2 + \lambda_3 a_3 \mid \lambda_1, \lambda_2, \lambda_3 \in R\}$$

$$L(u_1, u_2, u_3) = \{\forall q_x \in R^x \mid q_x = \xi_1 u_1 + \xi_2 u_2 + \xi_3 u_3 \mid \xi_1, \xi_2, \xi_3 \in R\}$$

$$p_x = q_x \quad \wedge \quad a_1 = u_1 \quad \wedge \quad a_2 = l_{21}u_1 + u_2 \quad \wedge \quad a_3 = l_{31}u_1 + l_{32}u_2 + u_3$$

$$\implies \lambda_1 a_1 + \lambda_2 a_2 + \lambda_3 a_3 = \xi_1 u_1 + \xi_2 u_2 + \xi_3 u_3$$

$$\implies \lambda_1(u_1) + \lambda_2(l_{21}u_1 + u_2) + \lambda_3(l_{31}u_1 + l_{32}u_2 + u_3) = \xi_1 u_1 + \xi_2 u_2 + \xi_3 u_3$$

$$\implies u_1(\lambda_1 + \lambda_2 l_{21} + \lambda_3 l_{31}) + u_2(\lambda_2 + \lambda_3 l_{32}) + u_3(\lambda_3) = (\xi_1)u_1 + (\xi_2)u_2 + (\xi_3)u_3$$

$$\implies \xi_1 = \lambda_1 + \lambda_2 l_{21} + \lambda_3 l_{31}, \quad \xi_2 = \lambda_2 + \lambda_3 l_{32}, \quad \xi_3 = \lambda_3$$

$$\implies L(a_1, a_2, a_3) = L(u_1, u_2, u_3)$$

II) Za kolone matrica A i L :

$$A = \begin{bmatrix} a_1 & a_2 & a_3 \end{bmatrix} = \begin{bmatrix} l_1 & l_2 & l_3 \end{bmatrix} \begin{bmatrix} u_{11} & u_{12} & u_{13} \\ 0 & u_{22} & u_{23} \\ 0 & 0 & u_{33} \end{bmatrix}, \quad a_1, a_2, a_3, l_1, l_2, l_3 \in \mathcal{M}_{n \times 1}$$

Dobijamo sistem analogan sistemu (4.1):

(4.2)

$$\Leftrightarrow \begin{cases} \mathbf{a)} & a_1 = \begin{bmatrix} l_1 & l_2 & l_3 \end{bmatrix} \begin{bmatrix} u_{11} \\ 0 \\ 0 \end{bmatrix} = u_{11}l_1 \Rightarrow a_1 = u_{11}l_1 \\ \mathbf{b)} & a_2 = \begin{bmatrix} l_1 & l_2 & l_3 \end{bmatrix} \begin{bmatrix} u_{12} \\ u_{22} \\ 0 \end{bmatrix} = u_{12}l_1 + u_{22}l_2 \Rightarrow a_2 = u_{12}l_1 + u_{22}l_2 \\ \mathbf{c)} & a_3 = \begin{bmatrix} l_1 & l_2 & l_3 \end{bmatrix} \begin{bmatrix} u_{13} \\ u_{23} \\ u_{33} \end{bmatrix} = u_{13}l_1 + u_{23}l_2 + u_{33}l_3 \Rightarrow a_3 = u_{13}l_1 + u_{23}l_2 + u_{33}l_3 \end{cases}$$

a)

$a_1 = u_{11}l_1 \Rightarrow$ vektori a_1 i l_1 su linearno zavisni.

$$L(a_1) = \{\forall s_x \in R^x \mid s_x = \epsilon_1 a_1 \mid \epsilon_1 \in R\}$$

$$L(l_1) = \{\forall t_x \in R^x \mid t_x = \eta_1 l_1 \mid \eta_1 \in R\}$$

$$\Rightarrow \epsilon_1 = u_{11}\eta_1 \Rightarrow L(a_1) = L(l_1) \Leftrightarrow u_{11} \neq 0$$

b)

$a_2 = u_{12}l_1 + u_{22}l_2 \Rightarrow$ vektori a_2, l_1 i l_2 su linearno zavisni.

$$L(a_1, a_2) = \{\forall s_x \in R^x \mid s_x = \epsilon_1 a_1 + \epsilon_2 a_2 \mid \epsilon_1, \epsilon_2 \in R\}$$

$$L(l_1, l_2) = \{\forall t_x \in R^x \mid t_x = \eta_1 l_1 + \eta_2 l_2 \mid \eta_1, \eta_2 \in R\}$$

$$s_x = t_x \quad \wedge \quad a_1 = u_{11}l_1 \quad \wedge \quad a_2 = u_{12}l_1 + u_{22}l_2$$

$$\Rightarrow \epsilon_1 a_1 + \epsilon_2 a_2 = \eta_1 u_1 + \eta_2 u_2$$

$$\Rightarrow \epsilon_1 u_{11}l_1 + \epsilon_2(u_{12}l_1 + u_{22}l_2) = \eta_1 l_1 + \eta_2 l_2$$

$$\Rightarrow l_1(\epsilon_1 u_{11} + \epsilon_2 u_{12}) + l_2(\epsilon_2 u_{22}) = l_1(\eta_1) + l_2(\eta_2)$$

$$\Rightarrow \eta_1 = \epsilon_1 u_{11} + \epsilon_2 u_{12}, \quad \eta_2 = \epsilon_2 u_{22} \Rightarrow L(a_1, a_2) = L(l_1, l_2) \Leftrightarrow u_{11}, u_{22} \neq 0$$

c)

$a_3 = u_{13}l_1 + u_{23}l_2 + u_{33}l_3 \Rightarrow$ vektori a_3, l_1, l_2 i l_3 su linearno zavisni.

$$L(a_1, a_2, a_3) = \{\forall s_x \in R^x \mid s_x = \epsilon_1 a_1 + \epsilon_2 a_2 + \epsilon_3 a_3 \mid \epsilon_1, \epsilon_2, \epsilon_3 \in R\}$$

$$L(l_1, l_2, l_3) = \{\forall t_x \in R^x \mid t_x = \eta_1 l_1 + \eta_2 l_2 + \eta_3 l_3 \mid \eta_1, \eta_2, \eta_3 \in R\}$$

$$s_x = t_x \quad \wedge \quad a_1 = u_{11}l_1 \quad \wedge \quad a_2 = u_{12}l_1 + u_{22}l_2 \quad \wedge \quad a_3 = u_{31}l_1 + u_{23}l_2 + u_{33}l_3$$

$$\Rightarrow \epsilon_1 a_1 + \epsilon_2 a_2 + \epsilon_3 a_3 = \eta_1 l_1 + \eta_2 l_2 + \eta_3 l_3$$

$$\Rightarrow \epsilon_1(u_{11}l_1) + \epsilon_2(u_{12}l_1 + u_{22}l_2) + \epsilon_3(u_{13}l_1 + u_{23}l_2 + u_{33}l_3) = \eta_1 l_1 + \eta_2 l_1 + \eta_3 l_1$$

$$\implies l_1(\epsilon_1 u_{11} + \epsilon_2 u_{12} + \epsilon_3 u_{13}) + l_2(\epsilon_2 u_{22} + \epsilon_3 u_{23}) + l_3(\epsilon_3 u_{33}) = (\eta_1)l_1 + (\eta_2)l_2 + (\eta_3)l_3$$

$$\implies \eta_1 = \epsilon_1 u_{11} + \epsilon_2 u_{12} + \epsilon_3 u_{13}, \quad \eta_2 = \epsilon_2 u_{22} + \epsilon_3 u_{23}, \quad \eta_3 = \epsilon_3 u_{33}$$

$$\implies L(a_1, a_2, a_3) = L(l_1, l_2, l_3) \iff u_{11}, u_{22}, u_{33} \neq 0$$

5. Neka je A regularna matrica i u, v vektori takvi da važi $1 + v^T A^{-1} u \neq 0$. Dokazati formulu Šermana i Morisona:

$$(A + uv^T)^{-1} = A^{-1} - \frac{A^{-1}uv^T A^{-1}}{1 + v^T A^{-1}u}. \quad (5)$$

Rešenje: Inverzna matrica je definisana kao:

$$MM^{-1} = M^{-1}M = I$$

1°

$$\begin{aligned} I &= (A + uv^T)(A + uv^T)^{-1} = (A + uv^T)\left(A^{-1} - \frac{A^{-1}uv^T A^{-1}}{1 + v^T A^{-1}u}\right) = \\ &= AA^{-1} + uv^T A^{-1} - \frac{AA^{-1}uv^T A^{-1} + uv^T A^{-1}uv^T A^{-1}}{1 + v^T A^{-1}u} = I + uv^T A^{-1} - \frac{Iuv^T A^{-1} + u(v^T A^{-1}u)v^T A^{-1}}{1 + v^T A^{-1}u} \end{aligned}$$

S obzirom da je $v^T A^{-1}u \in \mathbb{R} \neq -1$

$$\implies I + uv^T A^{-1} - uv^T A^{-1} \frac{1 + v^T A^{-1}u}{1 + v^T A^{-1}u} = I + uv^T A^{-1} - uv^T A^{-1} * 1 = I$$

Ostaje još da dokažemo i: $(A + uv^T)^{-1}(A + uv^T) = I$ kako bi polazna jednačina (5) važila.

2°

$$\begin{aligned} I &= (A + uv^T)^{-1}(A + uv^T) = \left(A^{-1} - \frac{A^{-1}uv^T A^{-1}}{1 + v^T A^{-1}u}\right)(A + uv^T) = \\ &= A^{-1}A + A^{-1}uv^T - \frac{A^{-1}uv^T A^{-1}A + A^{-1}uv^T A^{-1}uv^T}{1 + v^T A^{-1}u} = I + A^{-1}uv^T - \frac{A^{-1}uv^T I + A^{-1}u(v^T A^{-1}u)v^T}{1 + v^T A^{-1}u} = \\ &= I + A^{-1}uv^T - A^{-1}uv^T \frac{1 + v^T A^{-1}u}{1 + v^T A^{-1}u} = I + A^{-1}uv^T - A^{-1}uv^T * 1 = I \end{aligned}$$

$$\text{Na osnovu (1°) i (2°)} \implies (A + uv^T)^{-1} = \left(A^{-1} - \frac{A^{-1}uv^T A^{-1}}{1 + v^T A^{-1}u}\right).$$
